PROFESSIONAL SUMMARY

Data Analytics professional with an MSc from Dundalk Institute of Technology (2025) and real-world experience building ETL pipelines, machine learning models, and Power BI/Tableau dashboards that turn raw data into clear business decisions. Comfortable working across the full data lifecycle, from wrangling messy datasets in Python and SQL to deploying predictive models (Random Forest, XGBoost) and presenting insights to non-technical stakeholders. Familiar with PostgreSQL and MongoDB, and always looking to sharpen skills and add value. Now looking to bring this hands-on experience to a Data Analyst or Data Engineer role with a forward-thinking Irish organisation.

EDUCATION

MSc Data Analytics (NFQ Level 9), Second Class Honours Grade 1 (2.1)

2024 – 2025

Dundalk Institute of Technology, Ireland

Thesis: Prediction of Earthquake Magnitude from Historical Seismic Data Using Advanced Machine Learning Models

Modules: Python for Data Analysis, Statistics, Data Pipelines, Data Architecture & Databases, Machine Learning, Time Series Analysis, Data Visualization

Bachelor of Technology (B.Tech) (First Class)

2020 – 2024

APJ Abdul Kalam Technological University, India

Key Modules: Data Structures, DBMS, Software Engineering, Cloud Computing, Object-Oriented Programming, Algorithm Design & Analysis, Computer Security

PROFESSIONAL EXPERIENCE

Junior Data Analyst

Nov 2025 – Apr 2026

Briticana, Ireland

- Analysed 50,000+ records using Python (Pandas, NumPy) and SQL, supporting EDA reports and KPI dashboards that reduced decision-making turnaround time by 30%.
- Assisted in building Power BI and Tableau dashboards with drill-down functionality, replacing 10+ manual reports and enabling self-service analytics for 20+ business users.
- Supported automated ETL pipeline development across 5+ source systems, ensuring data accuracy, validation, and audit-readiness across all reporting workflows.
- Applied statistical analysis, hypothesis testing, and time series forecasting to identify operational trends and present insights to senior stakeholders.
- Contributed to KPI framework definition and report delivery using Agile tools (JIRA, Confluence, Teams), consistently meeting all project deadlines.

Data Analyst Trainee (Part-time)

Nov 2024 – Sep 2025

GoPlugable EV Charging, Drogheda, Ireland

- Collected, cleaned and analysed data from surveys, platform usage and user interactions using tools such as Excel, SQL and Power BI to support informed business decisions.
- Built dashboards and reports in Power BI and Excel to track trends, partner performance and user behaviour, enabling stakeholders to monitor key metrics and identify issues early.
- Translated complex data and analysis into clear, actionable insights for product, growth and operations teams, and contributed to evaluating survey results and platform metrics to improve user experience and support expansion of the EV charger network.

Retail Sales Assistant (Part-time)

Oct 2024 – Present

The Maxol Group, Drogheda, Ireland

- Manage daily forecourt operations including till management, cash handling, end-of-shift reconciliation, stock ordering and inventory control in a high-volume retail environment.
- Deliver efficient, customer-focused service to a large number of customers each day, resolving queries quickly and maintaining high standards of accuracy and professionalism.
- Progressed from initial part-time hours to a five-day-a-week role within seven months while completing an MSc full time, demonstrating resilience, strong work ethic, attention to detail and consistency under pressure.

Co-Founder & Project Manager (Freelance Agency)

Jun 2023 – Sep 2024

Magnox Media, Kerala, India

- Managed end-to-end delivery for 3+ international clients, leading a 6-member cross-functional team across requirements gathering, scoping, and final delivery.
- Analysed customer preference surveys (100+ respondents) for Dalia Women's Boutique, translating data insights into stock planning and promotional strategies that drove 30% sales growth.

- Delivered a full digital transformation project for Verity Credit Services (USA), contributing to 35–40% business growth through brand redesign and website development.
- Analysed campaign performance data across 3+ client accounts, producing structured reports and actionable insights that guided marketing and business strategy decisions.
- Maintained 100% on-time delivery across all client engagements through digital project coordination, documentation, and stakeholder communication.

PROJECTS

MSc Thesis — Earthquake Magnitude Prediction | Python | Machine Learning | Flask | Streamlit

- Engineered a modular ETL pipeline in Python processing 44,000+ seismic records, covering data ingestion, cleaning, validation, feature engineering, model training, and deployment into a fully reproducible ML workflow.
- Trained and evaluated 8 supervised ML models (Random Forest, XGBoost, SVR, MLP, Ridge, Lasso) using RMSE, MAE, and R^2 ; selected optimal model via 5-fold cross-validation and hyperparameter tuning.
- Deployed production-ready model via Flask REST API and Streamlit dashboard; applied SHAP and LIME explainability to surface key predictive features and support real-time magnitude prediction.

Spotify Trends Analysis | Power BI | Data Visualisation

- Streaming platforms rely on listening data to shape content and audience strategy; designed and deployed an interactive Power BI dashboard analysing music listening trends across artists, genres, and time periods, including data cleaning, transformation, and DAX-based KPI measure creation.
- Produced a structured stakeholder insight report summarising key findings, supporting data-driven decision-making in a business intelligence reporting format.

Vehicle Emissions Analyzer | Python | Statistics | Plotly | Shiny for Python

- With emissions regulations tightening across the auto industry, analysed the CO2 Emissions Canada dataset (7,385 vehicles) using Pearson correlation, simple and multiple linear regression, chi-square, and one-way ANOVA tests, finding that engine size and fuel consumption together explain 87.9% of the variance in CO2 emissions ($R^2 = 0.879$, $p < 0.001$).
- Built and deployed an interactive Vehicle Emissions Analyzer dashboard in Python, Plotly, and Shiny for Python, letting consumers and policymakers explore how engine size, fuel type, and vehicle class drive CO2 output.

Time Series Forecasting, Temperature & Humidity | Python | ARIMA | SARIMA | LSTM

- To support operational planning in weather sensitive sectors, tested stationarity of 369 days of temperature and humidity data for Ho Chi Minh City with the Augmented Dickey-Fuller test, then applied log transformation and differencing to make both series stationary before modelling.
- Built and compared ARIMA, SARIMA, and LSTM forecasting models on a 295/74 day train and test split, with LSTM achieving the lowest error on both variables (temperature RMSE 1.13, humidity RMSE 11.64), outperforming the statistical baselines.

CERTIFICATIONS

- AI in Risk Management and Fraud Detection (LinkedIn Learning, Sep 2026)
- Project Management Foundations (LinkedIn Learning, Sep 2026)
- Data Engineering Foundations (LinkedIn Learning)
- BCG X, Data Science Job Simulation, Customer Churn Prediction (Forage, Sep 2026)
- Introducing SAP Business Data Cloud (SAP, Aug 2026)
- SQL for Data Analysis (LinkedIn Learning, Jun 2025)
- Git Essential Training (LinkedIn Learning, Feb 2025)

TECHNICAL SKILLS

Programming & Data Analytics: Python (Pandas, NumPy, Scikit-Learn), SQL, EDA, Feature Engineering, Statistical Analysis, Data Modelling, KPI Development, Machine Learning (Regression, Classification, Clustering, Time Series), A/B Testing, SHAP & LIME Explainability, Anomaly Detection

Data Engineering & Databases: ETL/ELT Pipelines, Data Pipeline Design, Data Quality & Validation, PostgreSQL, MongoDB, Neo4j, Data Documentation, Reproducible Workflow Design

Business Intelligence & Visualisation: Power BI, Tableau, Excel, Dashboard Development, KPI Reporting, Business Intelligence, Report Automation, A/B Test Analysis, Insight Delivery, Stakeholder Communication, Requirements Gathering, Data Governance

Tools & Technologies: Jupyter Notebook, VS Code, Google Colab, Anaconda, Streamlit, Flask REST API, Apache Airflow, Apache Spark (PySpark), Docker, FastAPI, Plotly Dash, GitHub Actions, Shiny for Python, Git, Linux (Basics)

Methodologies & Frameworks: Agile, SDLC, Dimensional Data Modelling, Cross-Validation, Hyperparameter Tuning, CI/CD Fundamentals, Reproducible ML Workflows, Data Pipeline Development
